

# Student enrolment solution

Automate your Student Enrolment process with Ricoh's Digital Worker

## Meet R.E.D – Ricoh Education Digital Worker

Our **Digital Worker** can seamlessly create a student record in your School Management System, such as Synergetic, from information captured during the Enrolment application stage.

## Tired of entering student enrolment information into your School Management System (SMS)?

Student registrations and enrolments are a time-consuming process with many repetitive tasks to undertake. Usually this is a manual process with student and parent information supplied, in both physical (paper based) and digital (email or eForm) formats, to administration staff who then have to re-enter the data into their SMS.

Utilising the powerful automation tools in the Ricoh solution suite, with the expertise of the Ricoh Professional Services Team, we are pleased to present our latest Education offering to make student registrations and enrolments simpler, faster and more seamless for both Office Administration and the wider Education community.

## Robotic Process Automation made easy with R.E.D – Ricoh Education Digital Worker

Harness the power of the 'Bot' within Robotic Process Automation (RPA) to speed up the enrolment process and eliminate unnecessary data entry and paperwork.

But what is a Bot...? Think of it as a 'digital worker', working at non-stop higher speed, without errors, mimicking the same mouse clicks and keystrokes performed by your Enrolments Coordinator

**Talk to your Ricoh Education specialist to discover how R.E.D can assist your school or college with process automation, leaving you to focus on the business of learning!**
